Software Engineer with 3 years of full-stack experience and a passion for optimizing user experience through scalable, user-friendly front-end applications. Brings leadership and planning experience as a co-organizer of the Seattle-based DJ collective Milo House, managing logistics and operations for live events with 1000+ attendees.

WORK EXPERIENCE

Software Engineer Intern – *Soundry AI (YC W24)*

Sept 2023 – June 2024

- Assisted in planning development timelines and oversaw deployment of products and features to production
- Collaborated with designer to ensure alignment between visual Figma concepts and technical implementation
- Contributed in weekly scrum to share sprint updates, provide input, and align front-end work with product goals

Event Coordinator – *Milo House Collective*

July 2023 – Present

- Planned and managed events with upwards of 1000+ attendees, coordinating timelines and logistics with venues
- Curated DJ lineups and set event timelines to ensure seamless transitions and strong audience engagement
- Promoted events via social media and oversaw gear acquisition, setup, & teardown based on venue requirements

Team Lead – *Bobalust*

Jan 2020 – July 2024

- Enforce systems, procedures, and quality standards as manager overseeing teams of 2-5 staff per-shift
- Ensure all building operations ranging from store inventory, kitchen prep, to customer satisfaction are satisfactory
- Mentor staff members to improve productivity and team ability to work in varying team environments

PROJECTS

Soundry AI: Landing Page | *HTML, CSS, JavaScript, GitHub*

- Developed/deployed a new landing page contributing to an increase in new user downloads of 37%
- Implemented interactive JavaScript carousels and animations, optimized for desktop and mobile users
- Led design reviews and implemented smoother visual flow for landing page users across devices

Soundry AI: Sample Pack Selector | *React, JavaScript, Azure, TypeScript, GitHub*

- Refactored sample pack selector feature contributing to a 12% increase in feature usage with reduced load times
- Replaced outdated tile layout with a table, improving information clarity for users, streamlining feature navigation
- Managed project scheduling, ensuring timely testing and deployment via Git of the finished web-application feature

Personal Project: CRUD API Application | *HTML, CSS, JavaScript, SQL, Java Springboot*

- Developed a full-stack Spring-based web application and a RESTful API to direct its data manipulation
- Implemented seamless CRUD (Create, Read, Update, Delete) operations of API to edit back-end data
- Project integrated with an H2 SQL relational database for efficient and scalable data management of user data

EDUCATION

Green River College – Auburn, Washington

June 2024

- Bachelor of Science (B.S.) in Software Development
 - Relevant coursework: Data Structures, Software as a Service (SaaS), Full Stack Development, Relational Databases, Agile Dev Methods, AI

SKILLS

Languages: Java, JavaScript, TypeScript, HTML/CSS, PHP, SQL

Frameworks and Tools: Git, React, NodeJS, Linux, Google Cloud, Agile, RESTful APIs, Docker, Kubernetes, Springboot, Postman, Tailwind, Bootstrap, Microsoft Office 365

Personal: Management Experience, Strong Communication, Familiar w/ High-Stress Environments, Self-Motivated

Hobbies and Interests: Bouldering, Volleyball, Music Production & DJing, Live Event Coordination and Management
